[LinkedIn](#) | [Portfolio](#) | [Github](#)

Frontend engineer experienced in owning front-end delivery end-to-end, from technical and product planning to front-end architecture, framework and tooling decisions, release, and post-launch quality assurance. I specialize in complex enterprise systems, AI-powered workflows, analytics dashboards, and data-intensive applications, building clean, predictable React and TypeScript interfaces for large-scale products. I've shipped production features used by thousands of end users across EU and US enterprise products. Strong at untangling complex asynchronous behavior, designing stable state flows, and turning backend outputs into intuitive, reliable user experiences. Comfortable collaborating across product, design, and backend teams, contributing to technical discussions, reviewing implementations, and delivering maintainable, production-ready solutions. *Interested in collaborating with international teams across Europe and the USA on innovative, AI-enhanced products with real technical depth.*

Technologies and Languages

Frontend: React, Next.js, TypeScript, JavaScript (ES6+), HTML5, CSS3

State & Data: Redux, Zustand, Context API, TanStack Query/Router, Apollo Client, REST APIs, GraphQL

UI & Styling: Tailwind CSS, SCSS, Styled Components, MUI, Bulma, Radix UI, Shadcn/ui

Testing: Jest, React Testing Library, Vitest, Playwright, Cypress

Tools: Git, Docker, Vite, Webpack, Figma

AI/ML: LLM-integrated interfaces, AI assistants, RAG-based user experiences, MCP workflows

Working knowledge: Node.js, Python, C

Work Experience

Front-End Engineer at LeverX

Feb 2025 - Present | Remote (Europe & USA teams)

Driving front-end development for enterprise React applications, from technical planning and architecture to feature delivery and production releases. Building AI-powered workflows, analytics platforms, and scalable UI systems used by enterprise customers across EU and US markets;

Front-End Engineer at Videowindow

Aug 2022 - Mar 2025 | Remote (Netherlands)

Owned front-end development across smart-glass management platforms, digital signage systems, and enterprise dashboards. Designed scalable interfaces for device management, real-time monitoring, and multimedia scheduling while partnering with product and backend teams.

Education and Certifications

B.Sc. Computer Science, Technical Institute of Amsterdam, Expected graduation: 2027

Google AI Professional Certificate - Google Career Certificates (Apr 2026)

Google AI for App Building Certificate - Google Career Certificates (Apr 2026)

Anthropic Academy Certificate - Claude Code, MCP, Agentic Workflows - (Apr 2026)

Key Commercial Projects

Device Management System - *Enterprise platform for managing smart-glass deployments and connected hardware*

Architected front-end workflows for device provisioning, gateway routing, and access management. Implemented real-time monitoring for distributed device connectivity and operational status.

Tech: *React, TypeScript, Apollo GraphQL, Bulma, SCSS, Docker*

Digital Display CMS - *Enterprise CMS for managing digital signage networks and multimedia content*

Built scheduling and layout tools for multi-screen content delivery. Optimized video playback and rendering performance for reliable digital displays.

Tech: *React, TypeScript, Apollo GraphQL, Bulma, SCSS, Docker*

Risk-Reporting Tool - *Decision-support application for enterprise risk analysis and executive reporting*

Developed interactive dashboards and reusable data visualization components. Transformed complex datasets into clear, actionable insights for business stakeholders.

Tech: *React, TypeScript, Redux, Material UI, REST APIs*

AI-Powered Enterprise Compliance Platform - *Enterprise compliance platform integrating AI-assisted regulatory workflows*

Led front-end architecture and feature delivery for AI-powered compliance experiences. Integrated conversational AI into complex enterprise workflows with comprehensive automated testing.

Tech: *React, TypeScript, Redux, SCSS, Material UI, Jest, Vitest, Cypress, Playwright*

AI Survey Analytics Platform - *Analytics platform converting survey data into AI-generated insights and dashboards*

Architected scalable interfaces for AI-driven analytics and data exploration. Built performant dashboards using modern state management and data-fetching patterns.

Tech: *React, TypeScript, Zustand, Tailwind, TanStack Router, React Query, Shadcn/ui, Vitest*

Additional Information

Besides my native language-**Georgian**, I am fluent in both **English** and **Russian**. Currently in the process of acquiring proficiency in **German (A2)**.
